

6 Steps To A Great Experience

1. Measure wall area and cut to desired length
(box blade knife works best)

2. Secure one end and pull tight (ensuring no wrinkles) using a lath stretcher 
(simple stretcher made with a 2x4 and nails)

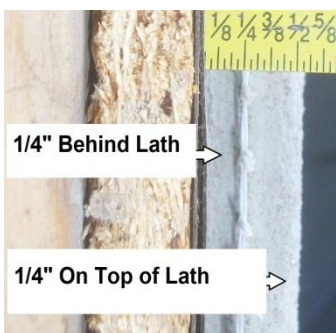

3. Nail every 6" vertically into studs (through foam strips). (If you have any loose areas, you may use a slap stapler to secure these areas)

4. Prepare type S or N mortar to Proper Consistency

5. Spread Mortar Correctly Onto SpiderLath
 $\frac{1}{4}$ " behind lath, $\frac{1}{4}$ " on top of lath
(be sure to press mortar firmly through lath openings)

6. When mortar is thumbprint hard, scratch with scarifier or $\frac{1}{8}$ " notched trowel.

Note: for best results allow scratch coat to set up for 24 hours.
