

# FEATURES & BENEFITS

# STUCCO, PLASTER & ADHERED MASONRY SYSTEMS

## Easy to...

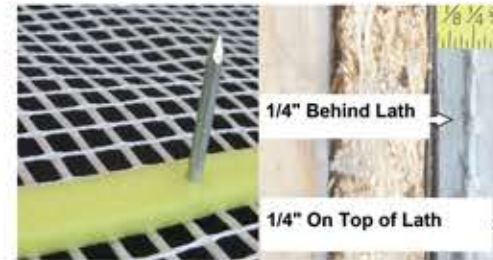

- Cut
- Handle
- Install
- Apply Mortar
- Transport

**S**piderLath was created by masons, for masons to meet and exceed all ASTM C1063 code requirements for lath installation. SpiderLath is made from alkali resistant fiberglass, eliminating corrosion and protecting your customers' investment for a guaranteed 50 years. Unlike traditional metal lath, SpiderLath bonds with the cementitious material, increasing its strength. SpiderLath ensures the best possible installation of **stone veneer, stucco, plaster, vertical carving/ stamping, and more.**

**S**piderLath provides six times the strength of traditional metal lath while also making installation a breeze. Lightweight, easy to cut and so simple to install. Use SpiderLath on the next stucco or plaster project and see the difference. SpiderLath helps reinforce stucco and reduce cracking. It's self furring with the built in, patent-pending, furring strips providing the code required 1/4" embedment behind and in front.

### SPIDERLATH ADVANTAGES OVER METAL LATH

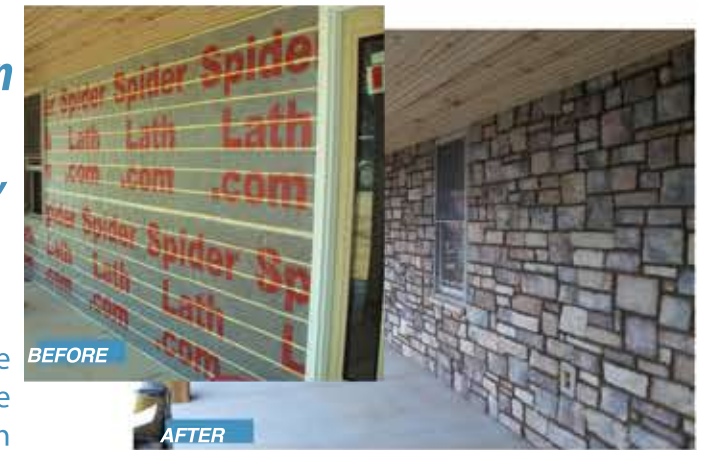

**"Built-In Furring System"**

### STORY OF THE SPIDERLATH STRIP SYSTEM

- **Foam Furring Strips**- Holds SpiderLath off the wall, allowing mortar to fully encapsulate the mesh. This creates a fiberglass reinforced scratch coat, providing optimal strength and flexibility. SpiderLath gives you a better wall and less cracking.
- **Nailing Guide**- Eliminates random fastening by following our code approved installation guidelines.
- **Gasket Sealer**- Seals around fastener hole, preventing water penetration to the substrate.
- **Shock Absorber**- Reduces the blow of the fastener, eliminating damage to the glass fibers.

**"Fully encapsulates the fiberglass mesh."**

APPROVED BY

**IBC**- International Builders Code

MEETS OR EXCEEDS  
**the following codes...**

ASTM C1787-14 ASTM C1788-14

ASTM C1764-12 ASTM C1063

# Vertical Carving Pre-Cast GFRC

## & Stamping

SpiderLath provides the additional security of bonding vertical stamping or carving projects to any wall. Although lightweight, SpiderLath has 6x the strength of metal lath along with increased tensile and flexural strength. Working with curves, arches and irregular surfaces has never been easier.

Add the extra insurance of SpiderLath "No Strip" to your next cast/ molded project. SpiderLath is the added ingredient to help reduce the occurrence of cracking and adds significant strength to the overall piece.

## THEMING

## SCULPTING

## ROCKERY

### Ideal For...

- Hardscaping, Landscaping
- Rock & Water Features
- Sculptures
- Themed Environments

Incorporate SpiderLath as the base to your next creation. SpiderLath is easy to mold around odd shapes and angles, easy to cut with no sharp edges. Cut installation time in half and design more intricate projects with the versatility of SpiderLath.
